DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities: page 1, in the last line of paragraph 1, --, now US Patent No. 6,720,799 B2-- should be inserted after "filed January 11, 2001". Appropriate correction is required.

2. Applicant is reminded of the proper content of an abstract of the disclosure.

A patent abstract is a concise statement of the technical disclosure of the patent and should include that which is new in the art to which the invention pertains. If the patent is of a basic nature, the entire technical disclosure may be new in the art, and the abstract should be directed to the entire disclosure. If the patent is in the nature of an improvement in an old apparatus, process, product, or composition, the abstract should include the technical disclosure of the improvement. In certain patents, particularly those for compounds and compositions, wherein the process for making and/or the use thereof are not obvious, the abstract should set forth a process for making and/or use thereof. If the new technical disclosure involves modifications or alternatives, the abstract should mention by way of example the preferred modification or alternative.

The abstract should not refer to purported merits or speculative applications of the invention and should not compare the invention with the prior art.

Where applicable, the abstract should include the following:

- (1) if a machine or apparatus, its organization and operation;
- (2) if an article, its method of making;
- (3) if a chemical compound, its identity and use;
- (4) if a mixture, its ingredients;
- (5) if a process, the steps.

Extensive mechanical and design details of apparatus should not be given.

Claim Objections

3. Claim 24 is objected to because of the following informalities: in line 2, "a second switch" should be changed to --a second summing junction switch--. Appropriate correction is required.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 22-24 are rejected under 35 U.S.C. 102(b) as being anticipated by Cheung et al. (6,344,767).

With regard to claim 22, Cheung et al. discloses in Fig. 4 a switched capacitor circuit, comprising an integrator (A1); a summing junction switch (between CIN' and ground & A1(-)) connected to the integrator; a sampling capacitor (CIN') connected to the summing junction switch; a signal conducting MOSFET switch (between VIN+ and CIN') connected to the sampling capacitor; and an inherent replica network (the network that generates signal $\Phi 1(\Phi 2)$) that controls a resistance of the signal conducting MOSFET switch, the replica network connected to a gate terminal of the signal conducting MOSFET switch.

With regard to claim 23, the reference also meets the recited limitation in this claim.

With regard to claim 24, the switched capacitor circuit further comprises a second summing junction switch (between CIN and ground & A1(+)) connected to a non-inverting terminal (+) of the differential integrator; a second sampling capacitor (CIN) connected to the second summing junction switch; a second signal conducting MOSFET switch (between VIN- and CIN) connected to the second sampling capacitor; and an inherent second replica network (the network that generates signal $\Phi 1(\Phi 2)$) that controls

a resistance of the second signal conducting MOSFET switch, the second replica network connected to a gate terminal of the signal conducting MOSFET switch.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. For example, Bazarjani (US 6,137,321) is cited as of interest because it discloses a linear sampling switch circuit.
